

Subtracting Integers

January 31 19 10:05 AM

* one way to think about subtracting integers is to "add the opposite", then use the addition rules or a number line to find the answer.

Ex. $(7) - (9) = (-2)$ 
 $(7) + (-9)$

Ex. $(-3) - (8) = (-11)$ 
 $(-3) + (-8)$

Ex. $(9) - (-12) = (21)$  ⊗ Subtracting a negative is the SAME as Addition.

Ex. $(-5) - (-4) = (-1)$
 $(-5) + (4)$

Ex. $(-13) - (-25) = (12)$
 $(-13) + (25)$
